Judge Name

Date

How to Score Every Row

Enter ONE number from 1 to 5. Every row is worth 5 points; harder sections have more rows and therefore more weight.

1	Weak	Missing, incorrect, non-functional, or little/no meaningful evidence.
2	Developing	Partially demonstrated; important gaps remain or substantial support is needed.
3	Meets Expectations	Core requirement is present, understandable, and works at an acceptable/basic level.
4	Strong	Complete, accurate, well integrated, and supported by good evidence; only minor issues.
5	Excellent	Highly effective, reliable, purposeful, well-tested/polished, and clearly justified by the team.

Judge the final Stage 3 work, using the previous-phase requirements as the baseline. Reward evidence, correct integration, and purposeful design - not complexity for its own sake. **Testing:** look for real trials/results, not only claims. **Hardware:** reward the best-fit use of components and reliable integration. **Teamwork & presentation:** look for shared ownership, clear communication, and the ability of multiple members to answer questions.

Specific Judging Task	What the Judge Should Look For	Score (1-5)	Judge Note
Problem, Research & Solution			Section Weight: 15 points
Problem, target users & research	Clearly defines the problem, exact users, importance, and supporting research findings/sources.		
Solution & user interaction	Solution directly addresses the problem and explains how users will interact with it step by step.		
Main features & value	3-4 main functions are purposeful and connected to the original user need.		

System, Circuit & Kit Use			Section Weight: 20 points
System structure	Overall system/block flow is clear: trigger/input -> controller/processing -> output/action.		

Stage 3 Judges' Rubric - DECI Level 1

MIT App Inventor + Kit Project - Stage 3 Judge Evaluation

Continue using the same 1-5 scale. Enter one score for each specific judging task.

Specific Judging Task	What the Judge Should Look For	Score (1-5)	Judge Note
System, Circuit & Kit Use (continued)			Section Weight: 20 points
Purposeful kit & component choice	Car/Robot Arm Kit and specific components are chosen because they fit the project, not simply because they are available.		
Circuit/component understanding	Connections and component roles are technically reasonable and match the design.		
Best hardware use & integration	Hardware capabilities are used effectively and, where implemented, behave reliably as part of the same solution.		
Programming Logic			Section Weight: 20 points
Events / inputs	Program begins from clear user/system events or inputs and reacts correctly.		
Conditions & decisions	Decision logic matches the intended behavior and important cases.		
Loops / timing / repeated behavior	Repeated actions or waiting/timing logic are handled correctly where required.		
Outputs & logic consistency	Program outputs match the flowchart/blocks and the described system behavior.		
MIT App Inventor & User Experience			Section Weight: 15 points
App role & user flow	App clearly supports or controls the solution and users can navigate the intended flow.

Continue using the same 1-5 scale. Enter one score for each specific judging task.

Specific Judging Task	What the Judge Should Look For	Score (1-5)	Judge Note
MIT App Inventor & User Experience (continued)			Section Weight: 15 points
Screens / interface quality	Screens are understandable, consistent, and appropriate for the target users.		
Blocks & working evidence	Real blocks/screens or a working demo show that the planned app logic is implemented.		
Testing & Integration			Section Weight: 10 points
End-to-end testing evidence	Team shows that the app and any hardware interaction were tested through realistic use cases, not only isolated parts.		
Reliability & improvement	Team identifies failures/limitations and explains changes or next improvements based on testing.		
Business & Value			Section Weight: 5 points
Benefit & delivery model	Explains who benefits, the value provided, and a realistic way the solution could reach users.		
Teamwork & Presentation			Section Weight: 15 points
Shared contribution	All team members participate and can explain the part they contributed.		
Communication & demonstration	Presentation is clear and the live/demo evidence supports the project story.		

Stage 3 Judges' Rubric - DECI Level 1

MIT App Inventor + Kit Project - Stage 3 Judge Evaluation

Continue using the same 1-5 scale. Enter one score for each specific judging task.

Specific Judging Task	What the Judge Should Look For	Score (1-5)	Judge Note
Teamwork & Presentation (continued)			Section Weight: 15 points
Q&A; & shared understanding	Team answers questions accurately and shows shared understanding of app, hardware, logic, and user need.		

Extra Requirements / Optional Bonus		Optional Bonus - max 10	
AI feature	Optional AI/ML/computer vision/NLP feature strengthens the same solution and includes prototype/evidence.		
Advanced App Inventor feature	Optional advanced app feature (e.g., multiple screens, data storage, enhanced interaction) is useful and supported by working evidence.		

Score Summary

Section	Maximum	Section Subtotal	Notes
Problem, Research & Solution	15		
System, Circuit & Kit Use	20		
Programming Logic	20		
MIT App Inventor & User Experience	15		
Testing & Integration	10		
Business & Value	5		
Teamwork & Presentation	15		
CORE TOTAL	100		

OPTIONAL BONUS (record separately, max 10)
